Método GET – Obtener estudiantes

Método POST – Agregar estudiantes

Método DELETE - Eliminar estudiantes

Método PUT - Modificar estudiantes

```
def update_estudiantes/<int:numero_control>')
def update_estudiantes(numero_control):
    dates = request.json

for j in estudiantes:
    if j['numero_control'] == int(dates['numero_control']):
        j['nombre'] = dates['nombre']
        j['edad'] = dates['edad']
        j['sexo'] = dates['sexo']
        return jsonify({'mensaje':'Estudiante modificado'}), 200
return jsonify({'error':'Estudiante no encontrado'}), 404
```
